StreakFree Wipes™

PerfectData's StreakFree Cleaning Wipes are an effective and convenient method for cleaning, drying and static control. Use on glass anti-glare filters, CRT screens, VDT or television screens and for general workstation cleaning, including keyboards, cabinetry and desktops. Safe for most glass, plastic and metal surfaces.

The unique two-step cleaning process includes one wet and one dry pad. The wet pad is premoistened with an exclusive anti-static cleaning solution that controls dangerous static charges while removing vision-inhibiting contaminants. The dry pad is an absorbent, lint-free cloth for wiping and drying, leaving the surface cleaned optically clear and streak-free.
10 premoistened wipe twins per carton.
